AOP 2027 ExCo view detailed requirements

Version 5.8.0 addendum. These requirements supplement AOP2027-Modeler-Detailed-Requirements-v5.7.0.docx. They cover the new ExCo presentation and command bridge. Existing funding, scoring, source exclusions and recipient allocation rules remain in force.

EXCO58-01 Default leadership view

Open the new build in ExCo view. Keep all six original tabs accessible through Six-tab workbench.

Acceptance evidence: ExCo default view and six-tab navigation browser checks.

EXCO58-02 Single calculation result

Company KPIs, priority bars, receiving organisation costs, drilldowns and exports use the same scenario result and finance ledger.

Acceptance evidence: 32-scenario ExCo parity, independent source replay and downloaded Excel ledger reconciliation.

EXCO58-03 Scope clarity

Company position always shows company cost. The 16-leader filter applies to accountable Programs in My portfolio and Decisions. Receiving-BU allocation is separate from accountability.

Acceptance evidence: All 16 leader ownership filters plus company recipient totals.

EXCO58-04 Benefit meaning

Show funded hard and soft submitted lifetime benefit claims separately. Do not label claims as annual savings or realised returns.

Acceptance evidence: Hard and soft benefit rendering checks and source classification regression.

EXCO58-05 Recommendation boundary

Compare baseline, best tested option and current scenario. State objective, protected funding and grid size. Invalidate the recommendation when the Programs source hash changes.

Acceptance evidence: 135-option analysis and changed-source recommendation guard.

EXCO58-06 Recommended draft

Save the current scenario before creating a fresh recommended child draft. Preserve parent lineage. Apply source settings without copying current manual decisions.

Acceptance evidence: Recommended child draft preserves parent ID and expected funding.

EXCO58-07 Decision preview

For P4 and optional P5, preview partial scope or exclusion with a rationale and exact before/after funding, total IT and budget excess. Cancel leaves state unchanged.

Acceptance evidence: Rationale, preview non-mutation, cancellation and partial-scope commit browser checks.

EXCO58-08 Stale preview guard

Apply only when scenario ID, revision and source hash still match the preview. Otherwise require a new preview.

Acceptance evidence: Stale preview rejected after a concurrent revision change.

EXCO58-09 Trade-off isolation

Apply whole-Programs trade-offs to the selected leader and F&R or BU Led stream. Keep the base budget unchanged and disclose any target undershoot.

Acceptance evidence: F&R and BU Led trade-offs match scenario 09; base budget stays €100M.

EXCO58-10 Lifecycle and evidence

Save, undo, finalise, fork and full Excel export use existing commands. Finalised scenarios disable editing. Changed-source unresolved decisions continue to block finalisation.

Acceptance evidence: Browser save/reload, undo, finalise/fork, exports, and refreshed decision holds.

EXCO58-11 Portable input validation

Reject imported negative or non-numeric requested amounts, merit outside 0–100, merit without rationale, and invalid review objects.

Acceptance evidence: Negative, non-numeric and out-of-range import rejection with valid zero and 100 boundaries.

EXCO58-12 Release preservation

Create v5.8.0 without changing the v5.7.0 HTML or either source workbook. Run 32 scenarios, source replay, exports, browser regression, refresh and ExCo tests.

Acceptance evidence: SHA256 preservation, 32-case v5.7 engine parity and full validation report.
