AOP 2027 Modeler Detailed Requirements

Version 5.7.0 | 30 September 2026 | Companion to PRD v5.7.0

This document defines detailed requirements for AOP 2027 Modeler v5.7.0. Each requirement includes an ID, title, description, acceptance criteria, affected tab(s), and priority. Requirements use language: MUST (mandatory), SHOULD (recommended), MAY (optional). Companion document: AOP2027-Modeler-PRD-v5.7.0.docx.

Requirement groups: EXCO (ExCo hierarchy, filter, demand, trade-off, AOP protection); BEN (benefit classification, display, data quality); UI (toggles, levers, KPIs, charts, filters, reset); FIN (finance model, unchanged from v5.0).

ExCo Accountability Requirements

EXCO-01 ExCo Accountability Hierarchy

Description: The engine MUST maintain a mapping of 16 ExCo members to all 35 organisation values. The mapping MUST be implemented as two complementary data structures plus a fuzzy match function.

Implementation:

- EXCO_HIERARCHY: dictionary keyed by leader name. Each entry contains role (string), segment (string), and orgs (array of organisation values).
- ORG_TO_EXCO: reverse lookup dictionary mapping each of the 35 organisation values to its ExCo leader name.
- excoOf(orgName): fuzzy match function that handles whitespace differences, encoding variations, and case-insensitive matching to return the ExCo leader for any organisation string.
- enrich() MUST add an exco field to every Programs row using ORG_TO_EXCO/excoOf().

ExCo Member Mapping:

Leader	Role	Segment	Organisations
Deeptha Khanna	BU Leader	Personal Health	PH
Shez Partovi	BU Leader	Enterprise Informatics	EI, I&D
Julia Strandberg	BU Leader	Connected Care	HPM, AM&D, SRC
Jie Xue	BU Leader	Precision Diagnosis	CT, DXR, MR, PDU
Bert van Meurs	BU Leader	Image Guided Therapy	IGT-S, IGT-D, STO
Wim Appelo	BU Leader	Integrated Supply Chain	ISC, STET-ISC
Ozlem Fidanci	BU Leader	International Regions	IR, Health & Safety
Jeff DiLullo	BU Leader	North America	NAM
Ling Liu	BU Leader	Greater China (merged from GRC)	GCR
Charlotte Hanneman	BU Leader	Finance & Group Security	Finance, Group Security
Laura Matz	Enterprise	IT	IT
Heidy Schein	Enterprise	People	People
Steve C de Baca	Enterprise	Patient Safety & Quality	PS&Q

Leader	Role	Segment	Organisations
Carla Silva Peron	Enterprise	Medical Office	Medical Office
Filip Koek	Enterprise	Internal Audit	Internal Audit
Marnix van Ginneken	Enterprise	Legal, Comms & Brand, IP&S	Legal, Comms & Brand, IP&S

Acceptance Criteria:

- AC-1: EXCO_HIERARCHY contains exactly 16 entries.
- AC-2: ORG_TO_EXCO maps all 35 unique organisation values.
- AC-3: excoOf() returns a valid leader for every org value in the demand dataset.
- AC-4: Every enriched Programs row has a non-null exco field.
- AC-5: Regional leaders (IR, NAM, GCR) receive both BU and EW demand from their orgs.

Tab(s): All. Priority: P1 (Must Have).

EXCO-02 Global ExCo Filter

Description: ExCo Leader MUST be added as the first filter dropdown on all Programs tabs. The filter MUST cascade to downstream filters.

Implementation:

- ExCo Leader dropdown is the first filter element on Tabs 2, 3, 4, and Tab 6 overview.
- Cascade chain: ExCo -> Organisation -> Platform. Selecting an ExCo leader narrows Organisation options to only that leader's mapped organisations.
- Organisation selection further narrows Platform options to platforms present in those organisations' demand.
- AND logic with all other filter dimensions (Funding Status, Type, Investment Area, text search).
- Tab 2: ExCo filter applies to both the Demand in Scenario table and the Prioritized Programs filters.

Acceptance Criteria:

- AC-1: ExCo filter dropdown present on Tabs 2, 3, 4, 6.
- AC-2: Selecting "Jie Xue" shows only CT, DXR, MR, PDU organisations.
- AC-3: Clearing ExCo filter restores all organisations in the Org filter.
- AC-4: ExCo + Org + Platform filters combine with AND logic.
- AC-5: Filter option counts update dynamically reflecting other active filters.

Tab(s): 2, 3, 4, 6. Priority: P1 (Must Have).

EXCO-03 Demand Split by ExCo (Tab 1)

Description: The Demand Split table on Tab 1 MUST be reorganised from a flat organisation list to collapsible ExCo groups.

Implementation:

- Each ExCo leader appears as a collapsible parent row.
- Parent row shows: Programs count, requested M€, prioritised M€, gap M€, % funded, hard benefits M€, soft benefits M€, operations cost M€.
- Click to expand: constituent organisations shown as child rows with the same columns.
- Colour-coded funding percentage: red for low (<50%), amber for medium (50-80%), green for high (>80%).
- Replaces the previous "Demand Split by Organisation" flat table.

Acceptance Criteria:

- AC-1: 16 ExCo parent rows visible (when all have demand).
- AC-2: Expanding any ExCo row shows its constituent organisations.
- AC-3: Parent row totals equal sum of child row values.
- AC-4: Hard and Soft benefit columns populated for all rows.
- AC-5: Percentage-funded values correctly colour-coded.

Tab(s): 1. Priority: P1 (Must Have).

EXCO-04 ExCo Trade-off Cockpit

Description: An interactive trade-off panel MUST be available on Tabs 3 (Functions & Regions) and 4 (BU Led) enabling per-ExCo leader budget negotiation.

Implementation:

- Position: below the filter bar on Tabs 3 and 4.
- Default state: collapsed/closed. Opens automatically when trade-off budget values are entered.
- Columns per ExCo leader row: Requested, Funded, Gap, % Funded, Hard Ben, Soft Ben, Trade-off Budget (input), Delta, Progs/Benefits impact.
- Trade-off Budget: user enters a target funding amount. Delta = Trade-off Budget - current Funded.
- Progs/Benefits impact: shows Programs count + Hard/Soft benefit M€ that would be added or removed if Apply is pressed.
- Apply button: includes/excludes P4 Programs by merit score ranking to match entered trade-off budgets. Creates decision log entries. Does NOT modify Total AOP (see EXCO-05).
- Reset button: clears all entered trade-off budget values in one click.
- Negative trade-offs: entering a budget below current funded amount models reductions. Lowest-merit P4 Programs are excluded first. Delta shown in red.
- Implementation uses batched transact() calls to avoid rendering issues during Apply.

Acceptance Criteria:

- AC-1: Trade-off cockpit visible on Tabs 3 and 4 when expanded.
- AC-2: Entering a budget value opens the cockpit if closed.
- AC-3: Apply includes/excludes correct Programs by merit ranking.
- AC-4: Apply creates decision log entries for each Programs change.
- AC-5: Apply does NOT change the Total AOP value.

- AC-6: Reset clears all budget inputs and reverts Programs changes.
- AC-7: Negative trade-off reduces funding by excluding lowest-merit P4 Programs.
- AC-8: No blank page or rendering error during Apply (batched transact).

Tab(s): 3, 4. Priority: P1 (Must Have).

EXCO-05 Total AOP Protection

Description: The Total AOP (M€) field MUST change only via manual user edit. No automated process (including Trade-off Apply) may modify it.

Implementation:

- Trade-off Apply button includes/excludes Programs but does NOT modify the Total AOP budget value.
- "On top off AOP" KPI displays the delta between actual allocation and user-set budget.
- Tabs 3 & 4: "On top off AOP" shown as a KPI tile. Red when over-budget, green when under.
- Tab 2: Allocated AOP shows "On top off: +X M€" (red) or "Under budget: X M€" (green).
- Total AOP changes ONLY when the user manually edits the budget input field on Tab 2.
- Presets do not change Total AOP. They only change lever settings.

Acceptance Criteria:

- AC-1: After Trade-off Apply, Total AOP value is unchanged.
- AC-2: "On top off AOP" KPI shows correct delta.
- AC-3: Red indicator when allocation exceeds budget.
- AC-4: Green indicator when allocation is within budget.
- AC-5: Manual edit of Total AOP input field updates the budget and all dependent calculations.
- AC-6: Preset application does not modify Total AOP.

Tab(s): 2, 3, 4. Priority: P1 (Must Have).

Benefit Classification Requirements

BEN-01 Benefit Classification Engine

Description: The engine MUST classify every Programs into one of four benefit categories using a deterministic classifyBenefit() function.

Classification Rules:

Class	Condition	benefitClass value
Hard	benefit > 0 AND area IN {Revenue Increase, Productivity Savings}	"hard"

Class	Condition	benefitClass value
Soft	benefit > 0 AND area IN {Cost Avoidance, Process simplification/efficiency gain, Compliance/Keeping the lights on, Security, Enabling} OR any other area with benefit > 0 not matching Hard	"soft"
Qualitative	benefit = 0 or null BUT (impact text non-empty OR problem statement non-empty)	"qualitative"
None	No numeric benefit AND no impact/problem text	"none"

Enriched fields per Programs row:

- benefitClass: "hard" | "soft" | "qualitative" | "none"
- benefitClassLabel: "Hard Benefit" | "Soft Benefit" | "Qualitative Only" | "No Benefit Data"
- benefitFlag: data quality flag string or null

Data Quality Flags:

Flag	Trigger Condition
K EUR suspect	Impact text contains a number that equals benefit amount x 1000 (suggests K€/M€ confusion)
Outlier	Benefit amount exceeds 100 M€
High ratio	Benefits accepted for prioritization; no benefit-only hold.
No business case	No numeric benefit, no qualitative text, no impact statement — zero evidence

Acceptance Criteria:

- AC-1: Every enriched row has benefitClass, benefitClassLabel, and benefitFlag fields.
- AC-2: classifyBenefit() is deterministic — same inputs always produce same classification.
- AC-3: Hard areas list is exactly: Revenue Increase, Productivity Savings.
- AC-4: Programs with benefit > 0 in any area not in the Hard list classify as Soft.
- AC-5: Programs with zero/null benefit but non-empty impact/problem text classify as Qualitative.
- AC-6: Data quality flags correctly detect K EUR suspect, outlier, high ratio, and no business case conditions.

Tab(s): All (engine-level). Priority: P1 (Must Have).

BEN-02 Hard/Soft Benefit Display

Description: All benefit displays across all tabs MUST consistently separate Hard and Soft benefits.

Display Locations:

Location	Display	Format

Location	Display	Format
Tab 1: Committed Benefits KPI	Hard (blue) / Soft (black). No highlight background.	Hard (blue) / Soft (black) inline
Tab 2: Allocated AOP KPI	"On top off" indicator	Red when over-budget
Tabs 3 & 4: KPI tile	"Committed Benefits" with subtitle	Hard (blue) / Soft (black). White card.
Tab 6: Committed Benefits KPI	Hard (blue) / Soft (black)	Hard (blue) / Soft (black)
Chart summary (Tabs 3/4/6)	"Committed: X Hard . Y Soft"	Replaces single combined number
Bubble tooltip	Benefit classification label	Hard Benefit / Soft Benefit / Qualitative Only / No Benefit Data
ExCo Demand table	Hard/Soft columns	M€ values per org row and grand total
ExCo Trade-off panel	Hard Ben / Soft Ben columns	M€ per ExCo leader

Acceptance Criteria:

- AC-1: Hard benefit sum is consistent across Tab 1, Tabs 3/4, and Tab 6.
- AC-2: Soft benefit sum is consistent across all displays.
- AC-3: Chart summary shows "Committed: X Hard . Y Soft" on Tabs 3, 4, 6.
- AC-4: Bubble tooltip shows the correct classification label per Programs.
- AC-5: ExCo Demand table org sub-rows and grand total show Hard/Soft (not empty).

Tab(s): 1, 2, 3, 4, 6. Priority: P1 (Must Have).

BEN-03 Benefit Data Quality Flags

Benefits accepted for prioritization; no benefit-only hold.

Implementation:

- K EUR suspect: compare impact text numeric values against benefit x 1000. Flag if match found.
- Outlier: flag if benefit amount > 100 M€.
- Benefits accepted for prioritization; no benefit-only hold.
- No business case: flag if all of benefit (numeric), benefitDetails (text), impact, and problem are empty/null.
- Flags stored in benefitFlag field on each Programs row.
- Programs detail popup MUST display any active flags (updated in v5.3 — see UI-11 for Details table and Funding Rationale label).

Acceptance Criteria:

- AC-1: K EUR suspect flag triggers when impact text = benefit x 1000.
- AC-2: Outlier flag triggers for benefits > 100 M€.
- AC-3: High ratio flag triggers for benefit/cost > 10x.
- AC-4: No business case flag triggers when all evidence fields are empty.
- AC-5: Flags visible in Programs detail popup.

Tab(s): All (engine-level). Priority: P2 (Should Have).

UI Requirements

UI-01 Bubble Chart Y-Axis Toggle

Description: The bubble chart MUST provide a pill-style toggle switch to change the Y-axis metric.

Implementation:

- Tabs 3 & 4: toggle between "Requested (M€)" and "Hard Benefits (M€)".
- Tab 6: toggle between "Prioritised (M€)" and "Hard Benefits (M€)".
- Tab 2: no toggle (scenario tab retains median/merit reference values).
- Pill-style toggle matching the Prioritised/Not Funded toggle design (blue active state).
- Toggle state persisted within the session.
- Replaces the previous dropdown selector.

Acceptance Criteria:

- AC-1: Pill toggle visible on Tabs 3, 4, 6 bubble charts.
- AC-2: Toggle switches Y-axis data and label.
- AC-3: No toggle on Tab 2.
- AC-4: Toggle state survives tab switches within same session.

Tab(s): 3, 4, 6. Priority: P1 (Must Have).

UI-02 Bubble Chart Legend Redesign

Description: The bubble chart legend MUST be moved from below the chart to a right-side panel showing per-category aggregated values.

Implementation:

- Legend positioned to the right of the bubble chart area.
- Compact table format: category colour swatch, category name, aggregated M€ value.
- Updates dynamically when filters change or Y-axis toggle is switched.

Acceptance Criteria:

- AC-1: Legend appears to the right of the chart, not below.
- AC-2: Each category shows colour, name, and M€ total.
- AC-3: Legend M€ values update when filters change.

Tab(s): 3, 4, 6. Priority: P2 (Should Have).

UI-03 Chart Summary Line

Description: A summary line MUST appear below the chart heading on Tabs 3, 4, and 6.

Format:

- "X / Y Programs funded for a total N M€ / M M€ Prioritised AOP 2027 demand with a committed Impact of Z M€"
- Impact text: "Committed: X Hard . Y Soft"
- Refreshes on filter change.

Acceptance Criteria:

- AC-1: Summary line present on Tabs 3, 4, 6.
- AC-2: Programs counts and amounts match filtered results.
- AC-3: Hard/Soft committed amounts match BEN-02 totals.
- AC-4: Summary updates when filters change.

Tab(s): 3, 4, 6. Priority: P2 (Should Have).

UI-04 Median/Merit Text Removal

Description: Median and merit reference text MUST be removed from Tabs 3, 4, and 6 chart areas. Retained on Tab 2 only.

Acceptance Criteria:

- AC-1: No median/merit text on Tabs 3, 4, 6.
- AC-2: Tab 2 retains median/merit reference values.

Tab(s): 2, 3, 4, 6. Priority: P2 (Should Have).

UI-05 Demand in Scenario Table Rebuild

Description: The Demand in Scenario table (Tab 2) MUST be rebuilt with collapsible BURF organisation groups, a pill-style toggle, and cascading ExCo filters.

Implementation:

- Replaces separate Demand Prioritized / Demand Not Funded sections with a merged table.
- Collapsible BURF organisation groups matching Tabs 3/4 design pattern.
- View-only: no editable fields. 9 columns matching EW/BU tables.
- Pill-style slide switch: Prioritised (default) / Not Funded. Teal/blue active state.
- Cascading filters: ExCo Leader -> Organisation -> Platform.
- Total row with filtered/unfiltered counts and benefits total.
- Positioned before the Funding Prioritization Gate section.

Acceptance Criteria:

- AC-1: Table shows collapsible BURF groups.
- AC-2: Toggle switches between Prioritised and Not Funded views.
- AC-3: ExCo filter narrows Organisation options.
- AC-4: Total row shows correct filtered counts.
- AC-5: Table is read-only (no editable cells).

Tab(s): 2. Priority: P1 (Must Have).

UI-06 Tab 1 KPI Redesign

Description: Tab 1 MUST display KPI tiles in a single row of 5 tiles using repeat(5,1fr) CSS grid.

Layout:

- Single row: Total IT AOP Demand (dark blue) | Programs Demand (white) | Operations Demand (white) | Committed Benefits (white, Hard blue + Soft black) | IT AOP 2026 (white, blue number).

Acceptance Criteria:

- AC-1: Single row has 5 tiles in repeat(5,1fr) grid.
- AC-2: Committed Benefits shows Hard (blue, 22px) + 'Hard' label (black) on line 1, Soft (black, 22px) + 'Soft M€' on line 2.
- AC-3: Total IT AOP Demand tile has dark blue styling.
- AC-4: 2026 Programs AOP and 2026 Operations AOP tiles are removed.
- AC-5: IT AOP 2026 tile has blue number, black regular sub-text.

Tab(s): 1. Priority: P1 (Must Have).

UI-07 Tab 2 KPI Styling

Description: Tab 2 KPI styling MUST use dark blue for Allocated AOP and white for all other tiles. The Allocated AOP tile MUST show an "On top off" indicator.

Acceptance Criteria:

- AC-1: Allocated AOP tile has dark blue background.
- AC-2: All other KPI tiles have white background.
- AC-3: "Demand left unfunded" tile is no longer dark.
- AC-4: "On top off: +X M€" shown in red when allocation exceeds Total AOP.
- AC-5: "Under budget: X M€" shown in green when allocation is within Total AOP.

Tab(s): 2. Priority: P2 (Should Have).

UI-08 Tab 6 Redesign

Description: Tab 6 MUST be redesigned with a 5-tile KPI row, simplified buttons, and updated styling.

Implementation:

- KPI tiles: 5 tiles in one row using repeat(5,1fr) CSS grid.
- Total IT AOP: dark blue (was plain).
- Operations AOP: white (was dark).
- Split of Programs AOP: "F&R X | BU Y M€" single-line format.
- Committed Benefits: Hard/Soft split.

- Buttons: "Finalise scenario" and "New working version" ONLY. Removed "Export complete portfolio" and "Export portable scenario" Download Excel button removed from filter toolbar.

Acceptance Criteria:

- AC-1: 5 KPI tiles in a single row.
- AC-2: Total IT AOP is dark blue, Operations AOP is white.
- AC-3: Only 2 buttons visible (Finalise, New Working Version).
- AC-4: Committed Benefits shows Hard/Soft split.
- AC-5: No Download Excel button in the filter row.

Tab(s): 6. Priority: P1 (Must Have).

UI-09 Filter Auto-Close

Description: All filter dropdowns across all tabs MUST auto-close immediately after a selection is made.

Implementation:

- Applies to: ExCo, Organisation, Platform, Funding Status, Type, Investment Area, and all other multi-select filter dropdowns.
- On selection (click on option): dropdown closes, filter applies, downstream cascading filters update.

Acceptance Criteria:

- AC-1: Clicking a filter option closes the dropdown.
- AC-2: Filter is applied immediately on close.
- AC-3: Cascading downstream filters update after close.
- AC-4: Applies to all filter dropdowns on all tabs.

Tab(s): All. Priority: P2 (Should Have).

UI-10 New Working Version

Description: Create a draft fork with parent lineage. Retain the current settings, manual Programs decisions, and request/merit/evidence reviews.

Acceptance: Parent scenario is retained; fork is editable; inherited decisions and settings reproduce the parent allocation; revision and event history begin anew. New Scenario is the separate action that resets to Optimal.

UI-11 Programs Detail Popup Redesign

Description: The Programs detail popup MUST display a Details table with key Programs attributes and a Funding Rationale type label.

Implementation:

- Details table displays: Priority, Benefit (Quantitative), Benefit (Qualitative), Payback Period, Problem Statement, Programs Scope, Impact and Cost of Not Doing.
- Funding Rationale shows "Default Logic" or "User Prioritised" label.

Acceptance Criteria:

- AC-1: Popup contains Details table with Priority, Benefit (Quantitative), Benefit (Qualitative), Payback Period, Problem Statement, Programs Scope, Impact and Cost of Not Doing.
- AC-2: Popup shows "Default Logic" or "User Prioritised" label next to Funding Rationale.

Tab(s): All tabs with Programs rows. Priority: P1 (Must Have).

Acceptance Tests (v5.2 additions)

All tests from v4.0 (AT-A1 through AT-F2) and v5.0 remain. New tests for v5.2:

Test ID	Description	Pass Criteria
AT-E1	ExCo hierarchy loaded	16 entries in EXCO_HIERARCHY; 35 keys in ORG_TO_EXCO
AT-E2	ExCo field on all rows	Every enriched Programs row has non-null exco field
AT-E3	ExCo filter cascading	Select Jie Xue -> org filter shows only CT, DXR, MR, PDU
AT-E4	Trade-off Apply does not change AOP	Total AOP before Apply === Total AOP after Apply
AT-E5	Trade-off Reset clears inputs	All trade-off budget input values are empty after Reset
AT-E6	Negative trade-off	Enter budget < funded -> lowest-merit P4 excluded -> delta shown in red
AT-B7	Hard/Soft classification present	Every row has benefitClass in {hard, soft, qualitative, none}
AT-B8	Hard benefits consistent	Hard sum on Tab 1 === Hard sum on Tabs 3/4 === Hard sum on Tab 6
AT-B9	Soft benefits consistent	Soft sum on Tab 1 === Soft sum on Tabs 3/4 === Soft sum on Tab 6
AT-B10	Data quality flags	High ratio flag present on Programs with benefit/cost > 10x
AT-U1	Y-axis toggle functional	Toggle on Tab 3 switches Y-axis label and data
AT-U2	Legend on right side	Legend element positioned to right of chart, not below
AT-U3	Summary line present	Tabs 3/4/6 show "Programs funded" and "Committed: X Hard . Y Soft"
AT-U4	No median/merit on Tabs 3/4/6	No text containing "median" or "merit" in chart area of Tabs 3/4/6
AT-U5	Demand in Scenario collapsible	BURF org groups collapse/expand on click
AT-U6	Filter auto-close	Clicking a filter option closes the dropdown immediately
AT-U7	New Working Version fork	Draft fork retains decisions and settings; parent lineage recorded

Test ID	Description	Pass Criteria
AT-U8	Tab 6 two buttons only	Only "Finalise scenario" and "New working version" buttons visible
AT-U9	Tab 6 five KPI tiles	5 KPI tiles in single row; Total IT AOP is dark blue
AT-U10	Programs popup shows Details table	Popup contains Priority, Benefit (Quantitative), Benefit (Qualitative), Payback Period, Problem Statement, Programs Scope, Impact and Cost of Not Doing
AT-U11	Programs popup shows Funding Rationale type	Popup shows "Default Logic" or "User Prioritised" label next to Funding Rationale

Traceability: Requirement to PRD Section

Requirement	PRD v5.2 Section	Status
EXCO-01	Section 2: ExCo Accountability Hierarchy	New in v5.2
EXCO-02	Section 6: Global ExCo Filter	New in v5.2
EXCO-03	Section 9.1: Tab 1 Element Reference	New in v5.2
EXCO-04	Section 5: ExCo Trade-off Cockpit	New in v5.2
EXCO-05	Section 4: Total AOP Protection	New in v5.2
BEN-01	Section 3: Hard/Soft Benefit Classification	New in v5.2
BEN-02	Section 3.4: Display across tabs	New in v5.2
BEN-03	Section 3.3: Data quality flags	New in v5.2
UI-01	Section 7.1: Y-axis toggle	New in v5.2
UI-02	Section 7.2: Legend	New in v5.2
UI-03	Section 7.3: Summary line	New in v5.2
UI-04	Section 7.4: Median/merit text	New in v5.2
UI-05	Section 8: Demand in Scenario Table	New in v5.2
UI-06	Section 9.1: Tab 1 Element Reference	New in v5.2
UI-07	Section 9.2: Tab 2 Element Reference	New in v5.2
UI-08	Section 9.6: Tab 6 Element Reference	New in v5.2
UI-09	Section 11.3: Filter auto-close	New in v5.2
UI-10	Section 11.2: New Working Version	New in v5.2
UI-11	Section 9 (new): Programs Detail Popup	New in v5.3
FIN-01	PRD v5.0 Section 4	Unchanged from v5.0
FIN-02	PRD v5.0 Section 4	Unchanged from v5.0
FIN-03	PRD v5.0 Section 4	Unchanged from v5.0
FIN-04	PRD v5.0 Section 4	Unchanged from v5.0

Finance calculation module — v5.7.0

The finance module is the calculation authority for Programs allocation and combined Programs + Operations recipient cost. The source-accountability view and the receiving-BU view represent the same cost and must never be added together.

Confirmed default and charging key

The Optimal default budget is 100 M€. LFR retains the verified share; Carry Over uses approved baseline caps without an ROI threshold; Sustain is 60% of its bucket; Value uses the remaining available budget; IT Simplification is optional and inactive by default. Manual changes retain any overspend visibly. PMI is on top.

EW charge to recipient b = funded EW Programs × charging fraction b. The BU row 276 percentage formulas sum to 0.001 because recipient values totaling 40 are divided by 40,000. The confirmed correction multiplies each source fraction by 1,000. It preserves the exact 22.63033175355452% unallocated share. Display rounding does not change the calculation.

FIN-01

One exact financial ledger feeds all six tabs, Portfolio Inclusion Table, both ExCo Trade-off Cockpits, AOP2027: Programs Demand Overview, Organisation IT Cost Allocation: Programs + Operations, and exports.

FIN-02

Separate demand selection from allocation. First compute requested, automatic, manual, final and unfunded for every active Programs record. Then allocate final funding using the appropriate source key. Allocation never changes merit or funding.

FIN-03

Single BU: use the row’s exact spend-allocation percentages, including sub-BU recipients. A confirmed sole recipient can receive 100% only when the source establishes that recipient; never substitute the requesting organisation for a missing charge key.

FIN-04

Cross BU: allocate final amount using the record’s exact percentages from SPEND ALLOCATION BY BUSINESS UNIT. Validate each recipient and row total. Do not redistribute an incomplete key automatically.

FIN-05

Indirect Cross BU follows its own source allocation, including Not allocated to BU. The requesting Function/Region remains the accountable origin. No fallback to the EW key is applied.

FIN-06

Enterprise-wide: isolate the Enterprise-wide charging row and apply its validated percentage vector to funded EW amounts. Retain both source Function/Region and recipient BU for drill-down.

FIN-07

PMI remains funded on top of the 100 M€ envelope, separately identified and not charged to BUs. Unknown types remain explicitly unmapped until a valid source routing exists.

FIN-08

Retain exact source percentage precision. Apply the confirmed 1,000× correction only to an EW vector totaling 0.001; accept a fraction vector totaling 1 directly. Other EW totals are exceptions. BU row percentages are never silently normalized. Missing balances remain Unallocated.

FIN-09

Programs total uses investment spend, not operating-expense-only cost. Source capitalization and expense splits may be shown separately; spend = capitalization + expense. Do not substitute COST ALLOCATION columns for total investment allocation.

FIN-10

Operations follows its independent Bill of IT allocation, not the Programs EW key. Each service ID has one cost and many traceable allocations. Keep own consumption, Region allocation and Function allocation separate before summing recipient cost.

FIN-11

Show accountability/consumption and receiving-BU charge as two views of the same cost. Never add Functions/Regions sender totals to their already allocated BU recipients. Seven top-level Operations recipient clusters reconcile to all 182 service costs.

FIN-12

Charge[b] = Single BU[b] + Cross BU[b] + Indirect Cross BU[b] + EW[b] + Operations own[b] + Operations Region[b] + Operations Function[b]. Group total also includes explicit pending allocation and separately retained PMI.

FIN-13

Confirmed carry-over baseline cap; no ROI threshold.

FIN-14

Benefits accepted for prioritization; no benefit-only hold.

FIN-15

Exclude missing-request records from active Programs overviews, prioritization and exports. Nine such records remain in the refreshed source. Preserve original cells and exclusion reasons. A completed record can return on refresh.

FIN-16

Exclude uninterpretable source decision records such as Excel errors and numeric zero decisions from active scope; list IDs, source cells and amounts in the audit. Blank decisions remain Unassessed; understood Priority TBD remains a visible decision hold.

FIN-17

Use Programs consistently in tab labels, tables, tooltips, exports, PRD and requirements. Remove the entire specified 29 September refresh banner and superseded assertions about illustrative budget, missing-request counts, benefit validation and Finance approvals. Keep provenance in the dedicated audit view.

FIN-18

Manual inclusion/exclusion/partial scope, request edits and reviewed merit changes are explicit logged scenario overlays. Preserve original cells and before/after values. ExCo trade-offs cannot change Total AOP; exclusions cannot silently refill the portfolio.

FIN-19

The allocation ledger records source file hash, sheet, row, request/baseline cells, key cell, Programs ID, source and scenario requests, funded amount, recipient fraction and charge. Key cells link to original formulas preserved in the complete source snapshot. The workbook overview identifies scenario and revision. These joins provide an independent manual-style replay.

FIN-20

No external handoff or Planisware load is required for this deliverable. Model finalization means a tested scenario artifact; external submission would be a separate user-requested action.

Reconciliation and known source balances

Default funded base Programs = 99.963 M€: EW 49.716 and BU Led 50.247. PMI = 5.190 M€; Operations = 470.3144630385122 M€; total IT = 575.4674630385122 M€. EW unallocated = 11.250895734597165 M€. BU-led unallocated includes 1.357 M€ explicitly assigned to Not allocated and 0.465 M€ missing from Bu-06 percentages. All balances remain included in the total without an invented recipient.

Scenario acceptance and traceability

Ten scenarios cover default Optimal, two Sustain variants, AOP-percent limits, absolute limits, the optional fifth lever, inclusion/partial scope, request/merit edits, F&R/BU ExCo trade-offs and combined 80 M€ stress/recovery. Each scenario must match an independent calculation reading the original two workbooks. Validate all Programs costs, stages, scores and funding, recipient totals, PMI separation, Operations invariance, browser views, persistence and exports.

Trace every allocation through Programs/service ID, source file SHA-256, sheet/row, request cell, baseline cell, key cell, funded amount, recipient fraction and final charge. Technical conformance and source completeness are reported separately. A passing arithmetic result does not resolve the source's remaining unallocated balances.
