AOP 2027 Modeler Product Requirements

Version 5.7.0 | 30 September 2026 | Benefits Reclassification + Data Refresh + Audit Trail — Column O Benefits Rule + Full Audit Engine

Version 5.7.0 adds the shared finance allocation ledger, confirmed EW charging split, baseline-capped carry-over rule, source exclusions, scenario request and merit edits, and independent ten-scenario validation. Six-tab navigation and source evidence are retained.

1. Product Scope

1.1 Modeler state

Standalone offline HTML: AOP2027-IT-Portfolio-Scenario-Modelling-v5.7.0.html. Six tabs share one scenario result and one finance allocation ledger. Engine v5.7.0; session schema 4. Source workbooks remain unchanged.

1.2 Six-tab structure

Tab	Name	Editable	Purpose
1	Demand Overview	No	KPIs: Total IT AOP Demand, Programs demand, operations, committed benefits (Hard/Soft), IT AOP 2026. Demand Split by ExCo with collapsible org groups.
2	Programs AOP Scenarios	Levers only	Four priority levers, Funding Prioritization Gate, Merit Score Framework, Demand in Scenario table (collapsible BURF groups, Prioritised/Not Funded toggle), decision log.
3	Functions & Regions	Yes	EW Programs. Editable allocation. ExCo/Org/Platform cascading filters, bubble chart with Y-axis toggle, ExCo Trade-off Cockpit.
4	BU Led	Yes	BU Programs. Same layout as Tab 3. Shares one scenario with Tab 3. ExCo Trade-off Cockpit.
5	Operations	No	TCO 3-level hierarchy, service catalog. Pre-aligned costs; read-only.

Tab	Name	Editable	Purpose
6	AOP 2027 : One Portfolio	No	Combined Programs + operations. Finalise, New Working Version. Org IT Cost Allocation table with filters. Bubble chart with Y-axis toggle.

1.3 Source authority

- Authoritative Programs source: AOP 2027 Consolidated Live 299262020.xlsx, saved 29 September 2026. The release stores original bytes, cached values, formulas and full SHA-256 provenance.
- 433 active Programs; requested demand 285.2129 M€ including 5.19 M€ PMI. Nine missing-request rows and four uninterpretable-decision rows are excluded from active scope and retained in the audit extract.
- Enterprise-wide charging at BU row 276 is an allocation key only. Its 40 M€ is excluded from all demand. Apply the user-confirmed 1,000× percentage correction and retain 22.63033175355452% as unallocated. PMI is funded separately on top of the base budget without a BU charge.
- Operations source: Updated - Preliminary AOP2027 Bill of IT for BU_R_F - 23.Sep.xlsx. All 182 service IDs reconcile to 470.3144630385122 M€; 36 consuming organisations and seven final recipient clusters are retained. No proportional scaling of Operations totals is used.

2. ExCo Accountability Hierarchy

2.1 Structure

16 ExCo members mapped to all 35 organisation values. Dictionary: EXCO_HIERARCHY with role, segment, orgs[]. Reverse lookup: ORG_TO_EXCO. Fuzzy match: excoOf() for whitespace/encoding differences.

Every enriched Programs row carries an exco field. Regional leaders (IR/NAM/GCR) club BU+EW demand together.

2.2 BU Leaders (10)

ExCo Leader	Segment	Organisations
Deeptha Khanna	Personal Health	PH
Shez Partovi	Enterprise Informatics	EI, I&D (Innovation & Design)
Julia Strandberg	Connected Care	HPM, AM&D, SRC
Jie Xue	Precision Diagnosis	CT, DXR, MR, PDU
Bert van Meurs	Image Guided Therapy	IGT-S, IGT-D, STO
Wim Appelo	Integrated Supply Chain	ISC, STET-ISC
Ozlem Fidanci	International Regions	IR, Health & Safety
Jeff DiLullo	North America	NAM
Ling Liu	Greater China (merged from GRC)	GCR
Charlotte Hanneman	Finance & Group Security	Finance, Group Security

2.3 Enterprise Function Leaders (6)

ExCo Leader	Segment	Organisations
Laura Matz	IT	IT
Heidy Schein	People	People
Steve C de Baca	Patient Safety & Quality	PS&Q
Carla Silva Peron	Medical Office	Medical Office
Filip Koek	Internal Audit	Internal Audit
Marnix van Ginneken	Legal, Comms & Brand, IP&S	Legal, Comms & Brand, IP&S

2.4 Engine integration

- EXCO_HIERARCHY: dictionary keyed by leader name. Each entry: {role, segment, orgs:[]}.
- ORG_TO_EXCO: reverse lookup from any of the 35 org values to ExCo leader name.
- excoOf(orgName): fuzzy match function handling whitespace/encoding differences.
- enrich() adds exco field to every Programs row.
- filter() supports exco dimension for cascading filters.

3. Hard/Soft Benefit Classification

3.1 classifyBenefit() function

New engine function classifies each Programs into one of four benefit categories:

Classification	Criteria	Label
Hard	benefit > 0 AND area in {Revenue Increase, Productivity Savings}	Hard Benefit
Soft	benefit > 0 AND area in {Cost Avoidance, Process simplification/efficiency gain, Compliance/Keeping the lights on, Security, Enabling} or other areas not in Hard set	Soft Benefit
Qualitative	No numeric benefit but has impact text or problem statement	Qualitative Only
None	No benefit data of any kind	No Benefit Data

3.2 Enriched fields

- benefitClass: "hard" | "soft" | "qualitative" | "none"
- benefitClassLabel: human-readable label for display
- benefitFlag: data quality flag (if applicable)

3.3 Data quality flags

Flag	Condition	Action
K EUR suspect	Impact text value equals benefit amount x 1000	Warning; manual review recommended
Outlier	Benefit amount > 100 M€	Warning; flagged for review
High ratio	Benefit/cost ratio > 10x	Accepted input; no eligibility hold

Flag	Condition	Action
No business case	No numeric benefit, no qualitative text, no impact	Flag; scored 0

3.4 Display across tabs

- Tab 1: "Committed Benefits" KPI shows Hard (blue, large) + "Hard" label (black, regular) / Soft (black, large) + "Soft M€" label (black, regular). No highlight background.
- Tab 2: Allocated AOP KPI shows "On top off" indicator when allocation exceeds Total AOP.
- Tabs 3 & 4: "Committed Benefits" KPI with Hard (blue) / Soft (black) format. No coloured background.
- Tab 6: "Committed Benefits" shows Hard (blue) / Soft (black) format matching Tab 1 style.
- Bubble chart tooltip: shows benefit classification label (Hard Benefit / Soft Benefit / Qualitative Only / No Benefit Data).
- Chart summary line: "Committed: X Hard . Y Soft" replaces single combined number.
- ExCo Demand table: org sub-rows and grand total show Hard/Soft columns.

4. Total AOP Protection

The Total AOP (M€) field changes ONLY via manual user edit. No automated process may modify it.

4.1 Trade-off Apply behaviour

- ExCo Trade-off Apply button includes/excludes P4 Programs by merit ranking.
- Apply does NOT modify the Total AOP budget. It only changes Programs inclusion/exclusion.
- The previous behaviour (Apply increased Total AOP by the sum of trade-off deltas) is removed.

4.2 "On top off AOP" KPI

- "On top off AOP" shows the delta between actual allocation and the user-set budget.
- Tabs 3 & 4: displayed as a separate KPI below the Committed Hard Benefits tile.
- Tab 2: Allocated AOP shows "On top off: +X M€" (red) when over budget, or "Under budget: X M€" (green) when under.
- Red indicates over-budget; green indicates under-budget.

4.3 Manual budget edit

The Total AOP input field on Tab 2 is the ONLY mechanism to change the budget. Presets do not change it. Trade-off Apply does not change it. Only direct user input changes it.

5. ExCo Trade-off Cockpit

5.1 Position and layout

Located below the filter bar on Tabs 3 (Functions & Regions) and Tab 4 (BU Led). Default state: closed. Opens automatically when trade-off budget values are entered.

5.2 Per-ExCo leader columns

Column	Description
Requested	Total requested demand for this ExCo leader's organisations
Funded	Currently funded amount from automatic prioritisation + manual overrides
Gap	Requested minus Funded
% Funded	Funded / Requested as percentage
Hard Ben	Sum of Hard benefit amounts for funded Programs
Soft Ben	Sum of Soft benefit amounts for funded Programs
Trade-off Budget	User input field: target funding amount for this leader
Delta	Trade-off Budget minus current Funded (positive = additional funding, negative = reduction)
Progs / Benefits impact	Programs count + Hard/Soft benefit M€ that would be added or removed

5.3 Apply and Reset

- Apply button: includes/excludes P4 Programs by merit score ranking to match the entered trade-off budgets. Creates tracked decisions in the decision log. Does NOT modify Total AOP.
- Reset button: clears all entered trade-off budget values in one click.
- Negative trade-offs supported: entering a budget BELOW current funded amount models reductions. Lowest-merit P4 Programs are excluded. Delta shown in red.
- Batched transact() calls used for Apply to avoid rendering issues.

5.4 Filter interaction

The trade-off cockpit receives filtered rows from the active tab filters (ExCo, Org, Platform, Funding Status, Type). Filter changes update the cockpit values in real time.

6. Global ExCo Filter

ExCo Leader is the first filter dropdown on all Programs tabs (Tabs 2, 3, 4, and Overview/Tab 6).

6.1 Cascading behaviour

- ExCo filter is the first in the cascade chain: ExCo -> Org -> Platform.
- Selecting an ExCo leader narrows Organisation options to that leader's mapped orgs only.
- Organisation selection further narrows Platform options.
- AND logic with all other filters (Funding Status, Type, Investment Area, text search).

6.2 Tabs affected

- Tab 2: ExCo filter in Demand in Scenario table and Prioritized Programs filters.
- Tab 3: ExCo filter in main filter bar.
- Tab 4: ExCo filter in main filter bar.
- Tab 6: ExCo filter in Overview filter bar.

7. Bubble Chart

7.1 Y-axis toggle

Pill-style toggle switch (matching the Prioritised/Not Funded toggle design) replaces the previous dropdown selector.

- Tabs 3 & 4: toggle between "Requested (M€)" and "Hard Benefits (M€)" on the Y-axis.
- Tab 6: toggle between "Prioritised (M€)" and "Hard Benefits (M€)".
- Tab 2: no toggle (scenario tab retains median/merit reference values).
- Toggle state is session-persistent.

7.2 Legend

- Legend moved from below chart to right-side panel.
- Compact table format showing per-category aggregated M€ values.

7.3 Summary line

Displayed below the chart heading on Tabs 3, 4, and 6:

- "X / Y Programs funded for a total N M€ / M M€ Prioritised AOP 2027 demand with a committed Impact of Z M€"
- Committed impact text: "Committed: X Hard . Y Soft"
- Summary refreshes on filter change.

7.4 Median/merit text

Removed from Tabs 3, 4, and 6. Retained on Tab 2 only.

8. Demand in Scenario Table (Tab 2)

8.1 Structure

Merged table replacing the separate Demand Prioritized / Demand Not Funded sections. Positioned before the Funding Prioritization Gate.

- Collapsible BURF organisation groups matching the Tabs 3/4 design pattern.
- View-only: no editable fields.
- 9 matching columns consistent with EW/BU tables.

8.2 Toggle switch

- Pill-style slide switch for Prioritised / Not Funded views.
- Prioritised is the default view.
- Teal/blue active state.

8.3 Filters

- Cascading filters: ExCo Leader -> Organisation -> Platform.
- ExCo narrows org options; org narrows platform options.
- Total row with filtered/unfiltered counts.
- Benefits total included in Total row.

9. Tab-by-Tab Element Reference

9.1 Tab 1 — Demand Overview

KPI Tiles (single row of 5, repeat(5,1fr) grid):

- Total IT AOP Demand (dark blue): Programs AOP + Operations AOP.
- Programs Demand (white): count and M€.
- Operations Demand (white): service count, pre-aligned.
- Committed Benefits (white, no highlight): Hard number (blue, 22px) + "Hard" (black, 13px) on first line, Soft number (black, 22px) + "Soft M€" (black, 13px) on second line.
- IT AOP 2026 (white): large number in blue, sub-text in black with Programs + Operations breakdown.

Demand Split by ExCo:

- Collapsible ExCo groups replacing flat organisation list.
- Per-ExCo row: Programs count, requested M€, prioritised M€, gap M€, % funded, hard benefits, soft benefits, operations cost.
- Click to expand constituent organisations. Colour-coded funding percentage.

9.2 Tab 2 — Programs AOP Scenarios

Section 1 — KPI Cards:

- Allocated AOP (dark blue): M€ and % of Total AOP, funded count, Within/Over status, "On top off" indicator.
- Initiatives Funded: count, partial scope count.
- EW/BU Led Share: split M€ and %.
- Open to Prioritisation or Over Total AOP: M€, variance text.
- Demand Left Unfunded: M€, missing request count.

Section 2 — Levers:

- Total AOP input field (manual edit only).
- Four preset buttons: Optimal Segmentation (default, blue-highlighted), Protect Commitments, Balance Sustain and Value, Release Sustain Capacity.
- Four lever cards in horizontal desktop layout (4-column grid). Each shows current allocation and fundable demand.
- Lever 1 (Legal & Compliance): Philips-style tick-mark slider.
- Confirmed carry-over baseline cap; no ROI threshold.
- Lever 3 (Sustain): basis toggle (% bucket / % AOP / M€).
- Lever 4 (Value): basis toggle.
- Allocation text centered on all levers, single-line nowrap.

Section 3 — Demand in Scenario Table:

- Collapsible BURF groups. Pill toggle: Prioritised / Not Funded.
- Cascading ExCo -> Org -> Platform filters.

Section 4 — Funding Prioritization Gate:

- 5 cards: Gate 0 + four priorities. Gate number and name inline. Bullet-list definitions at 10pt.

Section 5 — Merit Score Framework:

- 5 component cards in single row (5-column grid).
- Components: Benefit Strength (40%), Submitted Priority (25%), Captured Consequence (15%), Decision Band (10%), Payback Period (10%).

Section 6 — Decision Log:

- 3 columns: Revision/Time, Change Origin, Change Details (business-readable 1-liner).

9.3 Tab 3 — Functions & Regions

Filter bar:

- ExCo Leader, Organisation, Platform, New/Carryover/Sustain, Investment Area, Funding Status, text search.

ExCo Trade-off Cockpit:

- Below filter bar. Default closed. Per-ExCo leader: Requested, Funded, Gap, % Funded, Hard Ben, Soft Ben, Trade-off Budget, Delta, Progs/Benefits impact.
- Apply and Reset buttons.

KPI Tiles:

- Committed Benefits: Hard (blue, 18px) + "Hard" (black, 12px) on first line, Soft (black, 18px) + "Soft M€" (black, 12px) on second line. White card, no coloured background.
- "On top off AOP": delta between allocation and budget.

Bubble Chart:

- Y-axis pill toggle: Requested / Hard Benefits.
- Legend: right-side panel with per-category M€.
- Summary line below heading.

Programs Table:

- BURF summary rows collapsed by default. Editable allocation column.
- Sticky first column and header.

9.4 Tab 4 — BU Led

Identical layout to Tab 3. Same ExCo Trade-off Cockpit, filters, chart, and table structure. Shares one scenario with Tab 3.

9.5 Tab 5 — Operations

KPI Tiles (6):

- Total Operations 2027: 470.314463039 M€; 2026 run-rate: 470.667055448 M€; change: -0.352592410 M€.
- Operations own consumption: 320.258096632 M€; Regions: 63.461385361 M€; Functions: 86.594981045 M€.

TCO Table:

- 3-level collapsible hierarchy: BU Cluster -> Sub-Organisation -> Services.
- Columns: Organisation, AOP2027 Costs M€, Own Consumption (M€|%), Regions to BU (M€|%), Functions & CoEs (M€|%), Delta vs AOP2026 M€.
- Delta colour: positive = red, negative = green.
- Organisation and Platform filters with cascading counts. X of Y on total.

Service Catalog:

- Columns: Service ID, Service Name, Platform Name, AOP2027 Costs M€, AOP2026 Costs M€, Delta vs AOP2026 M€.
- Delta colour: positive = red, negative = green.
- Platform filter. X of Y on AOP2027 and AOP2026 totals when filtered.

9.6 Tab 6 — AOP 2027 : One Portfolio

KPI Tiles (5 in one row, repeat(5,1fr) grid):

- Total IT AOP (dark blue): Programs AOP + Operations AOP.
- Operations AOP (white): 470.314463 M€.
- Prioritized Programs AOP: funded amount.
- Split of Programs AOP: "F&R X | BU Y M€" single-line format.
- Committed Benefits: Hard/Soft split.

Bubble Chart:

- Y-axis pill toggle: Prioritised / Hard Benefits.
- Legend: right-side panel.
- Summary line: "X / Y Programs funded... Committed: X Hard . Y Soft".

Buttons:

- Finalise scenario: freezes revision.
- New Working Version creates a draft fork with parent lineage, retaining settings, Programs decisions and evidence reviews.
- Removed: "Export complete portfolio" and "Export portable scenario" buttons.

Organisation IT Cost Allocation Table:

- Seven BU clusters plus Unallocated and PMI. Columns separate Programs types, EW, Operations own/Regions/Functions, PMI and Total.
- Allocation shows the entire scenario and labels this scope; source-accountability filters apply to the portfolio view.

10. Prioritization Logic (v5.7.0)

10.1 Four-Priority Funding Structure

Every demand row is classified into exactly one of four priorities. Gate 0 checks evidence. Classification is deterministic and data-driven.

Priority	Name	Classification	Funding order	Default demand M€
P1	Legal & Compliance	Compliance name/year evidence, must-do decision, or CCB exception	Verified first; priority tier; merit	53.136
P2	Carry Over	Carry Over demand; confirmed funding requires baseline >0 and Must Do/Must Have	Confirmed first; baseline cap	107.5189
P3	Sustain & Hygiene	Change & Sustain, Continuous Improvement or Upgrades & Enhancements	Change & Sustain first; then merit	34.367
P4	Value Based	Remaining Programs; IT Simplification may be separated as P5	Merit ranking	85.001

10.2 Evidence Gate 0

Automatic eligibility retains source decision, condition, name, positive request and merit rules. Benefits alone do not create a hold. Carry Over requires a confirmed approved baseline.

10.3 Funding Algorithm

- Sort all rows by priority (P1->P4) then ranking within priority.
- Fund each eligible row at full requested amount if stage and portfolio budgets have capacity.
- Stage limit = target x (1 + tolerance/100). Portfolio limit = Total AOP x (1 + tolerance/100).
- P2: fund at min(Requested, Carry Over Baselined), not full request.
- Tolerance default: 0.0% (exact budget).
- Manual overrides after automatic: additions additive; exclusions do not refill silently.

10.4 Merit Scoring Framework (5 components)

0-100 composite score. Formula: Score = sum(raw_i / max_i x weight_i). Weights must sum to 100.0.

#	Component	Max Raw	Default Weight	Source Field(s)
1	Benefit Strength	50 pts	40%	Quantified Benefits (K€); Quantified Benefits Details (text)
2	Submitted Priority	25 pts	25%	Priority column
3	Captured Consequence	15 pts	15%	Impact and Cost of Not Doing; Problem Statement; Scope
4	Decision Band	10 pts	10%	Decision Band / Waste band
5	Payback Period	10 pts	10%	Payback Period column

10.5 Lever Controls

Lever	Priority	Basis Options	Default
1 . Legal & Compliance	P1	% of bucket / % of Total AOP / M€ allocation	Verified demand share (~75%)
2. Carry Over	P2	Confirmed approved baseline	No ROI threshold
3 . Sustain Engineering & Hygiene	P3	% of bucket / % of Total AOP / M€ allocation	60% of bucket
4 . Value Based Portfolio	P4	% of bucket / % of Total AOP / M€ allocation	100% of bucket

10.6 Four Scenario Presets

Preset	P1: LFR	P2: Carry Over	P3: Sustain	P4: Value
Optimal Segmentation (Recommended)	Verified LFR	Confirmed baseline cap	60% bucket	100% bucket
Protect Commitments	100% bucket	Confirmed baseline cap	100% bucket	10% AOP

Preset	P1: LFR	P2: Carry Over	P3: Sustain	P4: Value
Balance Sustain and Value	100% bucket	Confirmed baseline cap	75% bucket	15% AOP
Release Sustain Capacity	44% bucket	Confirmed baseline cap	75% bucket	20% AOP

11. Session and Reset

11.1 Default scenario

Optimal Segmentation is the default scenario applied on page load. The Optimal preset button is blue-highlighted to indicate active state.

11.2 New Working Version

New Working Version creates a draft fork with parent lineage, retaining settings, Programs decisions and evidence reviews.

- New Scenario applies Optimal Segmentation; New Working Version retains the current settings.
- New Working Version retains manual include/exclude decisions.
- New Working Version retains evidence reviews and scenario request/merit edits.
- Clears all ExCo trade-off budget values.
- Clears the decision log.
- Resets scenario revision counter.

11.3 Filter auto-close

All filter dropdowns across all tabs auto-close immediately after a selection is made. This applies to ExCo, Organisation, Platform, Funding Status, Type, Investment Area, and all other multi-select filter dropdowns.

11.4 Session schema

Session schema 4 (5 weights). Sessions saved with schema 3 (4 weights [50,25,15,10]) auto-migrate to schema 4 ([40,25,15,10,10]) on load.

12. QA and Acceptance Criteria

12.1 Core rendering checks

- All 6 tabs render with zero console errors.
- 433 active Programs processed, no duplicate IDs.
- Benefits consistently split as Hard/Soft across all displays (Tabs 1, 2, 3, 4, 6). Blue Hard / black Soft format verified.
- ExCo filter cascading works on all Programs tabs.
- ExCo Trade-off Cockpit Apply does not modify Total AOP.

- Demand in Scenario table shows collapsible BURF groups.
- Bubble chart Y-axis toggle functional on Tabs 3, 4, 6.
- Filter dropdowns auto-close after selection.

12.2 Financial reconciliation

- Requested = Final + Unfunded (per Programs, per stream, portfolio total; within +/-0.01 M€).
- EW Final + BU Final = Portfolio Final.
- Sum of stage allocations = Portfolio Total Allocation.
- Allocated AOP <= Total AOP x (1 + tolerance%).
- Total IT AOP = Programs Final Allocation + Operations AOP (470.314463 M€).
- Operations AOP is constant across Tabs 1, 5, and 6.

12.3 Benefit classification checks

- Every funded Programs has a benefitClass field (hard/soft/qualitative/none).
- Hard benefit sum matches across Tab 1, Tabs 3/4, and Tab 6.
- Soft benefit sum matches across all displays.
- "Committed: X Hard . Y Soft" summary line present on Tabs 3, 4, 6 charts.
- Bubble tooltip shows correct benefit classification label.

12.4 ExCo checks

- 16 ExCo leaders mapped to 35 organisations.
- ExCo filter on Tabs 2, 3, 4, 6 cascades to Org filter.
- Trade-off cockpit shows correct per-leader totals.
- Trade-off Apply creates decision log entries without modifying Total AOP.
- Trade-off Reset clears all entered budget values.

Appendix A: Requirement Delta v5.0 to v5.2

A.1 New requirements

ID	Title	Summary
EXCO-01	ExCo Accountability Hierarchy	16 leaders mapped to 35 orgs. EXCO_HIERARCHY, ORG_TO_EXCO, excoOf().
EXCO-02	Global ExCo Filter	First filter dropdown on all Programs tabs. Cascading ExCo->Org->Platform.
EXCO-03	Demand Split by ExCo	Tab 1 collapsible ExCo groups replacing flat org list.
EXCO-04	ExCo Trade-off Cockpit	Per-leader budget negotiation on Tabs 3 & 4. Apply/Reset. Negative trade-offs.
EXCO-05	Total AOP Protection	Apply does not modify budget. "On top off AOP" KPI.
BEN-01	Benefit Classification	classifyBenefit() -> Hard/Soft/Qualitative/None. Data quality flags.

ID	Title	Summary
BEN-02	Hard/Soft Display	Consistent Hard/Soft split across all tabs, charts, tooltips.
BEN-03	Data Quality Flags	K EUR suspect, outlier, high ratio, no business case.
UI-01	Y-axis Pill Toggle	Bubble chart toggle: Requested/Prioritised vs Hard Benefits.
UI-02	Legend Redesign	Right-side panel with per-category M€ table.
UI-03	Chart Summary Line	Tabs 3/4/6: funded count, total, committed Hard/Soft.
UI-04	Median/Merit Removal	Removed from Tabs 3/4/6; kept on Tab 2.
UI-05	Demand in Scenario Rebuild	Collapsible BURF groups, pill toggle, cascading ExCo filters.
UI-06	Tab 1 KPI Redesign	Single row of 5 tiles. Hard (blue) / Soft (black) benefits format. Removed 2026 Programs AOP and 2026 Operations AOP tiles.
UI-07	Tab 2 KPI Styling	Allocated AOP dark blue; others white. On top off indicator.
UI-08	Tab 6 Redesign	5-tile 1fr grid. F&R|BU single-line. Removed export buttons. Download Excel button removed from filter toolbar.
UI-09	Filter Auto-Close	All dropdowns auto-close after selection.
UI-10	New Working Version Reset	New Working Version creates a draft fork with parent lineage, retaining settings, Programs decisions and evidence reviews.
UI-11	Programs Detail Popup Redesign	New layout: Name header, Demand/Prioritised Demand, 7-field Details table, Merit Score breakdown, Funding Rationale type indicator.

A.2 Unchanged from v5.0

The following requirement groups from PRD v5.0 and v4.0 remain unchanged:

- FIN-01 through FIN-04: EW charging exclusion, BU cluster allocation, EW charge calculation, Finance QA harness.
- Prioritization logic (4-priority structure, merit scoring, 5 components).
- Operations tab specification (Tab 5).
- Source workbook contract and normalised record fields.
- Scenario persistence and decision history.
- Excel downloads and traceability.
- Platform mapping (normalizePlatform, DEPT_PLATFORM, SVC_PLATFORM_MAP).

Finance calculation module — v5.7.0

The finance module is the calculation authority for Programs allocation and combined Programs + Operations recipient cost. The source-accountability view and the receiving-BU view represent the same cost and must never be added together.

Confirmed default and charging key

The Optimal default budget is 100 M€. LFR retains the verified share; Carry Over uses approved baseline caps without an ROI threshold; Sustain is 60% of its bucket; Value uses the remaining available budget; IT Simplification is optional and inactive by default. Manual changes retain any overspend visibly. PMI is on top.

EW charge to recipient b = funded EW Programs × charging fraction b. The BU row 276 percentage formulas sum to 0.001 because recipient values totaling 40 are divided by 40,000. The confirmed correction multiplies each source fraction by 1,000. It preserves the exact 22.63033175355452% unallocated share. Display rounding does not change the calculation.

FIN-01

One exact financial ledger feeds all six tabs, Portfolio Inclusion Table, both ExCo Trade-off Cockpits, AOP2027: Programs Demand Overview, Organisation IT Cost Allocation: Programs + Operations, and exports.

FIN-02

Separate demand selection from allocation. First compute requested, automatic, manual, final and unfunded for every active Programs record. Then allocate final funding using the appropriate source key. Allocation never changes merit or funding.

FIN-03

Single BU: use the row’s exact spend-allocation percentages, including sub-BU recipients. A confirmed sole recipient can receive 100% only when the source establishes that recipient; never substitute the requesting organisation for a missing charge key.

FIN-04

Cross BU: allocate final amount using the record’s exact percentages from SPEND ALLOCATION BY BUSINESS UNIT. Validate each recipient and row total. Do not redistribute an incomplete key automatically.

FIN-05

Indirect Cross BU follows its own source allocation, including Not allocated to BU. The requesting Function/Region remains the accountable origin. No fallback to the EW key is applied.

FIN-06

Enterprise-wide: isolate the Enterprise-wide charging row and apply its validated percentage vector to funded EW amounts. Retain both source Function/Region and recipient BU for drill-down.

FIN-07

PMI remains funded on top of the 100 M€ envelope, separately identified and not charged to BUs. Unknown types remain explicitly unmapped until a valid source routing exists.

FIN-08

Retain exact source percentage precision. Apply the confirmed 1,000× correction only to an EW vector totaling 0.001; accept a fraction vector totaling 1 directly. Other EW totals are exceptions. BU row percentages are never silently normalized. Missing balances remain Unallocated.

FIN-09

Programs total uses investment spend, not operating-expense-only cost. Source capitalization and expense splits may be shown separately; spend = capitalization + expense. Do not substitute COST ALLOCATION columns for total investment allocation.

FIN-10

Operations follows its independent Bill of IT allocation, not the Programs EW key. Each service ID has one cost and many traceable allocations. Keep own consumption, Region allocation and Function allocation separate before summing recipient cost.

FIN-11

Show accountability/consumption and receiving-BU charge as two views of the same cost. Never add Functions/Regions sender totals to their already allocated BU recipients. Seven top-level Operations recipient clusters reconcile to all 182 service costs.

FIN-12

Charge[b] = Single BU[b] + Cross BU[b] + Indirect Cross BU[b] + EW[b] + Operations own[b] + Operations Region[b] + Operations Function[b]. Group total also includes explicit pending allocation and separately retained PMI.

FIN-13

Confirmed carry-over baseline cap; no ROI threshold.

FIN-14

Benefits accepted for prioritization; no benefit-only hold.

FIN-15

Exclude missing-request records from active Programs overviews, prioritization and exports. Nine such records remain in the refreshed source. Preserve original cells and exclusion reasons. A completed record can return on refresh.

FIN-16

Exclude uninterpretable source decision records such as Excel errors and numeric zero decisions from active scope; list IDs, source cells and amounts in the audit. Blank decisions remain Unassessed; understood Priority TBD remains a visible decision hold.

FIN-17

Use Programs consistently in tab labels, tables, tooltips, exports, PRD and requirements. Remove the entire specified 29 September refresh banner and superseded assertions about illustrative budget, missing-request counts, benefit validation and Finance approvals. Keep provenance in the dedicated audit view.

FIN-18

Manual inclusion/exclusion/partial scope, request edits and reviewed merit changes are explicit logged scenario overlays. Preserve original cells and before/after values. ExCo trade-offs cannot change Total AOP; exclusions cannot silently refill the portfolio.

FIN-19

The allocation ledger records source file hash, sheet, row, request/baseline cells, key cell, Programs ID, source and scenario requests, funded amount, recipient fraction and charge. Key cells link to original formulas preserved in the complete source snapshot. The workbook overview identifies scenario and revision. These joins provide an independent manual-style replay.

FIN-20

No external handoff or Planisware load is required for this deliverable. Model finalization means a tested scenario artifact; external submission would be a separate user-requested action.

Reconciliation and known source balances

Default funded base Programs = 99.963 M€: EW 49.716 and BU Led 50.247. PMI = 5.190 M€; Operations = 470.3144630385122 M€; total IT = 575.4674630385122 M€. EW unallocated = 11.250895734597165 M€. BU-led unallocated includes 1.357 M€ explicitly assigned to Not allocated and 0.465 M€ missing from Bu-06 percentages. All balances remain included in the total without an invented recipient.

Scenario acceptance and traceability

Ten scenarios cover default Optimal, two Sustain variants, AOP-percent limits, absolute limits, the optional fifth lever, inclusion/partial scope, request/merit edits, F&R/BU ExCo trade-offs and combined 80 M€ stress/recovery. Each scenario must match an independent calculation reading the original two workbooks. Validate all Programs costs, stages, scores and funding, recipient totals, PMI separation, Operations invariance, browser views, persistence and exports.

Trace every allocation through Programs/service ID, source file SHA-256, sheet/row, request cell, baseline cell, key cell, funded amount, recipient fraction and final charge. Technical conformance and source completeness are reported separately. A passing arithmetic result does not resolve the source's remaining unallocated balances.
